

Day 3 - Written Answers

Interview Questions

What is Salesforce?

Salesforce is a cloud-based CRM platform used to manage customer data, sales, marketing, and business processes.

What is a Flow?

A Flow is a Salesforce automation tool used to automate business processes without code.

What is a Validation Rule?

A Validation Rule ensures records satisfy required conditions before they are saved.

Difference between Before Save Flow and After Save Flow.

Before Save Flow updates the current record before save. After Save Flow performs actions like emails and related record updates after save.

What is Apex?

Apex is Salesforce's programming language for custom business logic.

Business Scenario

Allow a student to apply only when the student's CGPA is greater than or equal to the Job Minimum CGPA using a Validation Rule.

Design Challenge

Objects: Student, Job, Application.

Relationships: Student-Application and Job-Application.

Automation: Before Save Flow sets Application Date. After Save Flow sends a confirmation email.

Flow Explanation

Before Save Flow: Automatically sets the Application Date before saving.

After Save Flow: Sends a confirmation email after the Application record is created.

Validation Rules

1. Prevent Low CGPA.
2. Closing Date Validation.
3. Mandatory Fields Validation.

Conclusion

This assignment demonstrates Salesforce automation using Flows and Validation Rules.
